You can think of "if and only if" statements as having two parts: an implication and its converse. We might say one is the "if" part, and the other is the "only if" part. We also sometimes say that "if and only if" statements have two directions: a forward direction „P !Q" and a backwards direction (P Q, which is really just sloppynotation for Q !P).

Discrete mathematics is the study of mathematical structures that are fundamentally discrete rather than continuous. In contrast to real numbers that have the property of varying "smoothly", the objects studied in discrete mathematics - such as integers , graphs , and statements in logic [1] - do not vary smoothly in this way, but have distinct, separated values.
